

Dear Affiliates,

One area of treatment that has been receiving a lot of attention of the past few years is that for Post-Concussion Syndrome and other traumatic brain injuries. We have conducted 2 studies at the Institute to show how an integrative approach using CST, VM, and NM have been able to assist people suffering from these conditions.

Due to the overwhelming success of our two Concussion Intensive Program and Research Studies, we are committed to providing our therapists with tools to approach, educate and offer relief to so many who live with these life altering conditions.

On this website you will find these support materials, as well as videos about the research and programs.
